Security and privacy
for company's data and information.

In a world where data is becoming more and more a **valuable asset**, organizations have realized that they do not only need to protect their proprietary information from external attackers, but also from **internal** ones.

Investing with reliable state-of-the-art security measures and tools to prevent sensitive data breach is essential.   However, these measures cannot **prevent** the breach of sensitive data if insiders can take pictures of the computer screens! Taking pictures leaves no log trail that identifies the perpetrator.

Whilst the number of Insider-Related breaches rises every year, the Verizon 2019 Data Breach Investigations report states that **34%** of all breaches in 2018 were caused by Insiders.

Here comes the **necessity** for a solution that can minimize the risk of internal threats and solve the continuous struggle of protecting all company's owned data and information.

SOLUTIONS

DIGITAL WATERMARK

DataPatrol Digital Watermark Solution applies the Watermark to all end users' machines and servers with detailed information about the logged in user, IP Address, time, and other metadata. With DataPatrol Digital Watermark you will be able to set up granular **policy control**, assign policies to different **groups** and apply a **cusomized** appearance to a specific watermark.

ANTICOPY FEATURE

The AntiCopy feature from DataPatrol allows administrators to control **(Enable & Disable)** the "Text Copy Feature" on your windows based machines. If the feature is enabled, users will not be allowed to **copy** any text, and this can be enabled only when specific process is running.

BENEFITS

1 IDENTIFY **OWNERSHIP** OF YOUR DATA
By applying digital watermarks on the screens, you make a statement that any data belongs to the company only.

2 **FORENSICS**
Metadata information will appear on all the screens, so you can track and investigate any publicly shared information.

3 **ALERT**
Having permanent watermarks on the screens, you assure and alert all insiders that these data are confidential, and any exfiltration will be tracked.

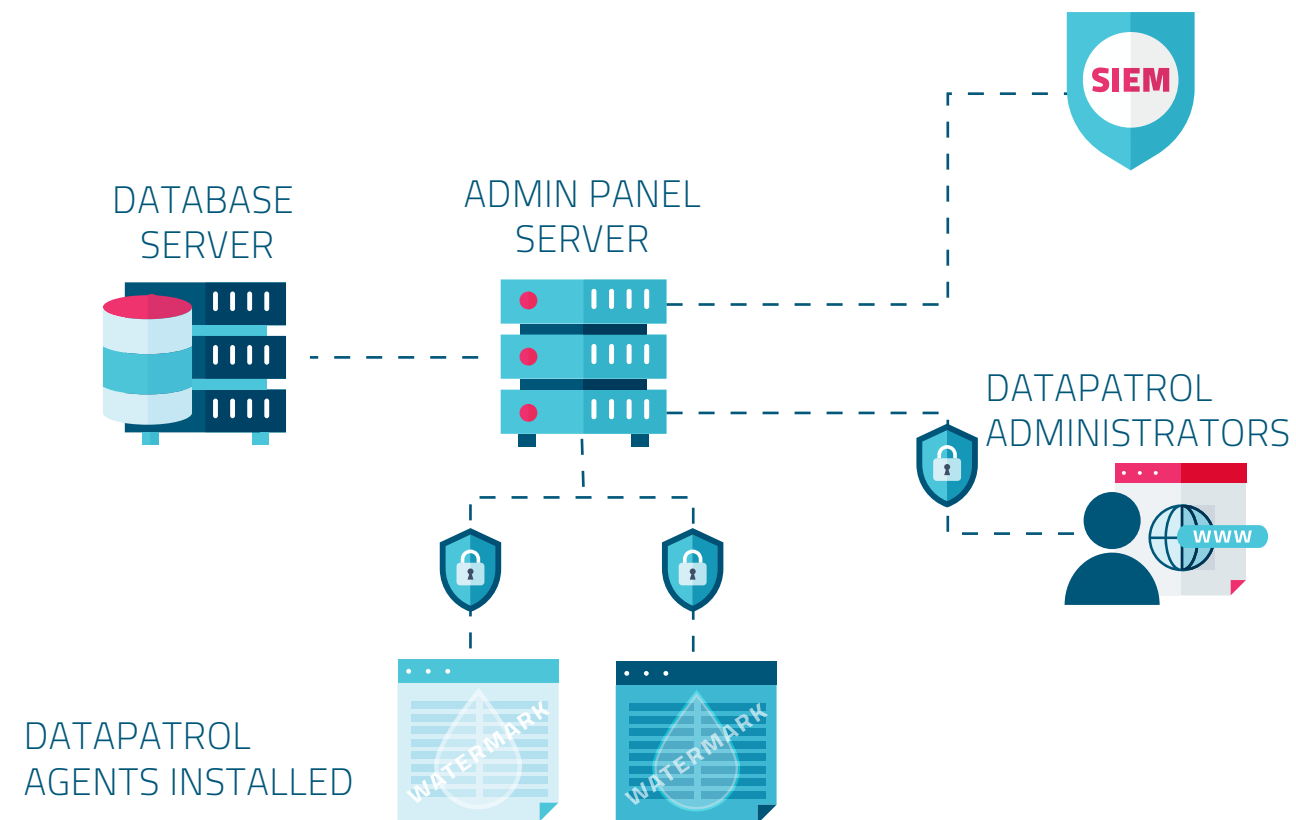

4 **COMPLIANCE**
Utilizing the AntiCopy feature which forces Data Entries to write genuine content rather than copying it.
